### DETAILED ACTION

Receipt of applicants' amendments and remarks submitted December 13, 2004 is acknowledged.

#### *Claim Rejections 35 U.S.C. 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 59-64 are rejected under 35 U.S.C. 103(a) as being unpatentable over Metcalf et al.

Metcalf teach a method of using oxandrolone for nitrogen retention wherein the daily of amounts of oxandrolone are from 5 mg, 10 mg, 20 mg, and up to 150 mg. Oxandrolone were taken as single dosage daily. See, particularly, Method at page 60. Metcalf also teach that the optima dosage is about 25 mg or 30 mg a day.

Metcalf et al. do not disclose whether the oxandrolone composition comprises a pharmaceutical carrier or whether it is a liquid or solid.

However, it would have been prima facie obvious to one of ordinary skill in the art, at the time the claimed invention was made, to make a dosage composition comprising the particular amounts as disclosed by Metcalf et al. and a pharmaceutical carrier, either in liquid or solid form since optimization of a pharmaceutical dosage form is within the skill of artisan.
